I'm so glad someone in IT is talking about this challenge. Nothing kills an IT project like a little lack of sharing and collaborating on standard processes and procedures. And, having spent my whole life in IT, I've seen the proof of this first hand.

Now that I have my own IT company, I simply cannot let this happen. Not just at Axero, but at any of our customers either. I am talking about bringing new customers onto our platform. We close a couple of sales every month—which means hundreds of new users who need new standard processes and procedures.

Our intranet software is built for sharing and collaboration. But IT has to lead the way, so to speak. As companies migrate to our platform, they leave some of their old setup behind. For the most part, it's a good thing. That's why they come to us in the first place: because they want something better than what they have. But before everyone can enjoy the new technology, the IT has to put its heads together, resolve conflicts and create new protocols.
