Site Settings

The most common settings you might need to change.

<div></div>	Community name	<div>CommuniFire Intranet</div>	
<div></div>	Post login landing page	<div>Homepage</div>	
<div></div>	Allow self-registration	<div><input checked="" type="checkbox"/> Yes</div>	Auto approve members <div><input type="checkbox"/> Yes</div>
<div></div>	Allow access only to registered members	<div><input checked="" type="checkbox"/> Yes</div>	
<div></div>	Allowed email domains for user registration	<div></div>	
<div></div>	Show chat popup	<div><input checked="" type="checkbox"/> Yes</div>	
<div></div>	Notification counts in page title	<div><input type="checkbox"/> Yes</div>	
<div></div>	Enable rich text HTML editor in comments	<div><input checked="" type="checkbox"/> Yes</div>	
<div></div>	Expand comments in entity activity	<div><input checked="" type="checkbox"/> Yes</div>	

Setting	Description
Community name	This is the name of your intranet
Post login landing page	Choose the page where people are sent after they login. You can choose: Homepage, MyAccount, Profile or a Custom URL. If you choose the Custom URL, enter a relative path without the domain name or virtual directory. (E.g. /custom-page)
Allow self-registration	If checked, people without an account will have access to the Registration page, to enter their details for a new account. If unchecked, individuals cannot create their own accounts. Account creation is restricted to administrators or moderators, who can initiate the process on behalf of users. Default value is false.
Auto approve members	If checked, people will be automatically approved as members once they confirm their registered email. If unchecked, people will need to be manually approved by the system admin even after they confirm their email. Default value is true.
Allow access only to registered members	If checked, people must register and login to the platform before accessing anything. If unchecked, then your platform can be viewed by Guests in a read-only mode.
Allowed email domains for user registration	You can restrict user registrations to specific email domains. This is useful if you only want to allow people to register using your company

	email domain. Enter a list of comma separated values (e.g. yourdomain.com, yourotherdomain.com), or enter * to allow any domain.
Show chat popup	The chat popup appears in the lower right corner of the main site showing online people with their status and a link to start a chat with them.
Notification counts in page title	Check this if you want to show live notification and message counts in the browser tabs.
Enable rich text HTML editor in comments	If checked, then the HTML rich text editor will be turned on for commenting on content entries (Articles, Blogs, Events, etc). If unchecked, then a simple text area will be available.
Expand comments in entity activity	If checked, comments will be displayed with content entries in the Activity Stream. People will also be able to comment on content entries in the Activity Stream. If unchecked, then people can only comment on Activity Stream posts. (Note: Turning this on gives you more flexibility to comment on others posts. However, it may also add a bit of noise to the Activity Streams.)
