# Advanced Settings

Version 18

Published 3/25/2017 12:01 AM by [Anonymous User](#)   Last updated 5/21/2021 07:36 PM by [Grace Kamau](#)

Advanced settings are additional customization and configuration settings infrequently used.

ⓘ Home page URL	https://myintranet.communifire.com
ⓘ Stock photo albums (csv)	6487,7612
ⓘ Minimum length for username	3
ⓘ Maximum length for username	100
ⓘ Minimum length for password	4
ⓘ Maximum length for password	100
ⓘ Allow members to modify date & time format	☐ Yes
ⓘ Enable Terms & Conditions	☐ Yes

Setting	Description
Domain name	This is the complete URL of your hosted application. For example: https://www.mycommunity.com.
Home page URL	Use this to set any other page in the community as the landing page, instead of the default homepage. For example, if you want to set the forums homepage as the landing page, simply enter its URL as: https://YourApplicationUrl.com/forums Leave this field as blank if you do not want to change your community landing page. Note: This field is disabled if you have a Page Builder page serving as your homepage.
Stock photo albums (csv)	A CSV of the albums you'd like to have available as stock photos. For example: 12,4,26.
Minimum length for:	• Username • Password Note: These settings will be overridden if a regex is applied to the profile fields in Control Panel > People > User Profiles .
Maximum length for:	• Username • Password Note: These settings will be overridden if a regex is applied to the profile fields in Control Panel > People > User Profiles .
Allow members to modify date & time format	If checked, people will be able to change their date and time format in User Level Preferences . If un-checked, then people will by default inherit the admin date and time format settings and will not be able to override them.
Enable Terms & Conditions	Check this option to enable terms and conditions for submitting articles.
Enable URL Mapper	Communifire has an in-built URL mapping module which you can use to link (301 re-direct) to your earlier web-pages in order to preserve search engine indexing ranks.
Include full case text in the case tracker emails?	If checked, case tracker emails will contain the full content of the case. Leave this un-checked if you do not want case details to be sent via emails (for security purposes).
Enable File Viewer	If checked, you can view files in Communifire without downloading them.
Enable calendar sync from 3rd party systems	Enable calendar import from external sources functionality allows space users to import events/calendars from Outlook. Check yes, if you would like to enable this feature.
Enable showing events from other spaces in calendar	Enable events from other spaces in calendar functionality allows users to manage events in the calendar from other spaces of which they are part of. Check yes, if you would like to enable this feature.
Enable content expiration	Content expiration feature will be enabled for Articles, Blogs, Files, Videos and Wikis. You can expire a content on a specific date and time. You can also set the content visibility after expiration.
Invitation expiration days	This is the number of days an invitation to join the community is valid. This setting only controls the top level community and does not control invitations sent to join a 'space.'
Flag entity threshold count	Use this value to set the number of times a post must be flagged so that it automatically becomes deactivated. If the threshold is set to 5, then when 5 members flag the same content, the content disappears (is deactivated).
User online time window	A user is "online" and active if he/she has clicked or interacted with any page within "x" number of minutes. This "x" number of minutes is the online time window. Default value is 5 minutes.
Maximum file upload size (MB)	The maximum size of a file that can be uploaded in the community. Set it to "0" to allow unlimited file size.
Enable CAPTCHA	If checked, CAPTCHA controls will be visible throughout the community, otherwise there will be no CAPTCHA validation in the community.
Enable CAPTCHA for logged in members	Check this if you want to enable CAPTCHA for logged in people. By default, logged in people will not see the CAPTCHA control, but for extra security for public facing websites, you may want to enable it.
Moderate article comments	If checked, article comments will require moderation.
Delete Activity Log on content delete	If checked, deleting content will also delete activity log.
Load code syntax highlighter in editor	If checked, you can insert code in a callout in the editor through Tools > Code highlight.
Number of notifications displayed	This specifies the number of notifications to display in the notification box before scrolling.
Image width for:	• Space image • Space icon • Article image • Blog image • Event image • Wiki image • Idea image

	• Idea Image These images appear beside their content.
Top level community image	This image is used in the "Where to create" space selection list, if you have content outside of spaces enabled.

Click **Save System Settings** to save settings.
