

Communifire Version

Version 5

Published 4/3/2017 05:32 AM by [Matt Trujillo](#) Last updated 5/31/2018 08:18 PM by [Grace Kamau](#)

In this area, you can view your Communifire version and the last time your Intranet was upgraded.

▫
▫

Communifire is a Single Tenant Architecture, meaning you get your own instance of Communifire, separate from other customer sites. Your files and databases are separate. You are also on a stable version which works best for your company. Every year, we release a major version of Communifire and throughout the year, we release service releases which fix small bugs found after launching new versions. Communifire will contact you when we are ready to upgrade your site. If you would like to initiate an upgrade because you feel your Intranet needs an upgrade, please [submit a private case](#).
