If you haven't used Page Builder yet, we suggest checking out [Create Page Builder Page](#) and first.

To edit a Page Builder page:

1. Click the gear icon > **Page Builder**.
2. Next to a page, click the gear icon > **Edit Page**.
3. Make changes to the page.
4. Click **Publish changes**.

Note: When you change the URL of a Page Builder page, the old URL doesn't automatically redirect to the new URL. If you've hyperlinked the old URL anywhere, people will get a 404 error when they click the link. To prevent this, go to **Control Panel > System > System Properties** and set **AddPageBuilderPageURLChangesToURLMapper** to *true* before you change the page URL.

Alternative Way

1. Open the Page Builder page.
2. Click the black element on the far right.
3. Click **Edit Page**.
