On the Single Sign On page, you can view and manage SSO settings.

The screenshot shows the Axero Control Panel interface. At the top, there is a navigation bar with 'Control Panel', 'People', 'Content', 'System', and 'Analytics' menus. The 'System' menu is expanded, showing a list of options: Settings, Look and Feel, System, and Domain. Under 'System', the following items are listed: Recent Activities, Exception Log, Email Queue, Advanced System Utilities, Single Sign On (highlighted with a red arrow), REST API Settings, Log Archive Settings, Background Tasks Log, and Communifire Version. Other options under 'System' include General Settings, Application Settings, System Properties, Integrations, External Drives, Workflows, System Permissions, Profanity Filters, and Robots.txt. Under 'Look and Feel', there are Logo and Branding, CSS Overrides, Localized Content, Page Builder, and Page Builder Templates. Under 'Domain', there are Domain Configuration, License Manager, Media Servers, and URL Mapper. Below the navigation bar, there is an 'Axero Blog' section with three articles: 'Top 12 Questions About the Communifire Intranet Software' (13 days ago), 'Does Your Intranet Do This? The Key to Productive Digital Workplaces' (23 days ago), and 'Skip Culture Training and Do This Instead' (27 days ago). To the right of the blog is a 'Helpful Videos' section and a 'Communifire Support, Services & Add-Ons' section with a link to 'Learn more about our support and consulting services' and contact information for Axero Sales.

The screenshot shows the 'Single Sign On' configuration page in the Axero Control Panel. The page title is 'Single Sign On' and it has sub-sections for 'Settings' and 'Data Mapping'. Below the title, there is a message: 'Complete the below information to setup your SAML Single Sign On after you have completed the steps on the server outlined here. Click here.' There are two radio button options: 'Disable SSO' (selected) and 'Azure Active Directory'. Below these options, there is a checkbox for 'SAML'.
