

External Drives

Version 7

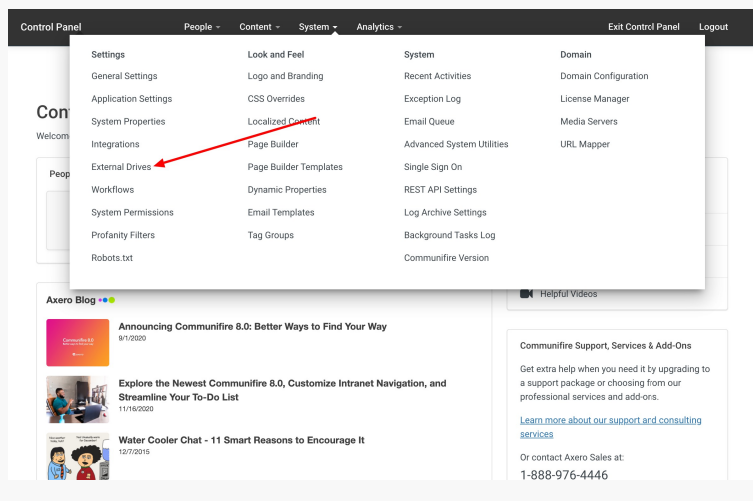

Published 1/23/2020 09:11 PM by [Grace Kamau](#) Last updated 5/11/2021 11:22 PM by [Grace Kamau](#)

Add a cloud storage drive in the Control Panel to bring external files into Communifire. Once a user connects their external account in Files, they can view, search for, and download external files right in Communifire. You can even upload files to your external account from Communifire. Communifire supports two-way syncing for Box, Dropbox, Google Drive, Sharepoint, and OneDrive.

In the Control Panel, you can manage external drives for the top level community. "Top level community" refers to the entirety of your intranet, in contrast to spaces, which are sub-communities of the top level community. Top level files can be accessed through the [Browse](#) menu.

External Drives

Manage external drives for the top level community. Here you can mount external drives (such as SharePoint Documents, OneDrive, etc.) to your Communifire Files section. You must setup your [integration](#) prior to mounting drives. When a drive is mounted, you can access files from the external location from inside Communifire. All files are indexed and searchable through Communifire's search engine.
