Note: Refer to REST API: Create Content to check required, not required, and optional parameters for every entity.

Required Parameters	How to use	Description
API key	Used in the request URL. Either in: - OR - Set in header: request Header.Add(RestApi-Key, x)	Communifire REST API key for the Communifire portal you are making the call for
ContentID	Used in the request URL as a path parameter	Unique identifier for a content. List of supported entities: Articles, Blogs, CMS Pages, Wikis, Ideas, Photos, Albums, Forums, Forum Groups, Forum Topics, Forum Posts.
Content JSON	Used in the request body	This is JSON that represents a content object that you're updating. This should be of the format seen below in the sample given.

Optional Parameters	How to use	Description
ContentTitle	Used in the request body	Content Title of the entity to be updated.
ContentSummary	Used in the request body	Content Summary of Articles, Blogs or Videos to be updated.
ContentBody	Used in the request body	Content Body of the entity to be updated.
CategoryID	Used in the request body	CategoryID for Articles, Blogs, CMSPage or Ideas to be updated.
ParentContentID	Used in the request body	Used in Wikis, Forums, Forum Topics, Forum Posts to specify the parent content under which this content is updated.
ContentStageID	Used in the request body	Used in Ideas to specify Idea stage.
IsFeatured	Used in the request body	Used to mark content as "featured"
		true= Set the content as featured
RequiresReReadConfirmation	Used in the request body	Used in a Wiki, Articles, Blogs and other content types that support required reading, with the exception of Files.
		true = will require people who have already confirmed required reading to re-confirm the new version once published.
		false = updated content version will be required reading only for those who have not yet confirmed the prior version.

Example Request

PUT https://myintranet.communifire.com/api/content/2304

Body:

```
"{
    \"ContentTitle\":\"Jupiter is the fifth planet from the Sun\",
    \"ContentBody\":\"Jupiter is primarily composed of hydrogen with a quarter of its mass being helium, although helium only comprises about a tenth of the number of molecules. It may also have a rocky core of heavier elements, but like the other giant planets, Jupiter lacks a well-defined solid surface. \"
}"
```

Note: Stringify your JSON data.

Example Response

Content ID is returned as ResponseData.

```
{
    "IsError":false,
    "ResponseMessage":"ToBePublished",
    "ResponseData":2304
}
```

Please Note The content type that you pass in the header of your request should be **application/json**.
