JSON
Requires Authentication?
YES
Product Version
5.2 and above

Required Parameters	How to use	Description
API Key	Used in the request URL: &token=x OR Set in header: request.Headers.Add(Rest-Api-Key, x)	Communifire REST API key for the Communifire portal you are making the call for.
CategoryID	Used in the request URL as a path parameter	Unique identifier for a particular content category. List of supported entities: Articles, Blogs, Videos, CMS Pages, and Ideas.
Category JSON	Used in the request body	This is JSON that represents a content category object that you're updating. This should be of the format seen below in the sample given.

Optional Parameters	How to use	Description
ParentCategoryID	Used in the request body	ID of the parent category of the new category.
StatusID	Used in the request body	Unique ID to identify the status of category. A category can have "Draft" or "Active" status. Draft Category is not visible to the Users. Accepted values are: • 1 = Published • 2 = Draft
CategoryName	Used in the request body	Name of category.
CategoryDescription	Used in the request body	Brief description of category.

Example Request

PUT https://myintranet.communifire.com/api/content/categories/2304

```
"{
    \"CategoryName\":\"Satellite\",
```

```
    \"CategoryDescription\":\"A celestial body orbiting the earth or another planet.\"
}"
```

Note: Stringify your JSON data.

Example Response

True/false is returned as ResponseData.

```
{
    "IsError":false,
    "ResponseMessage":"",
    "ResponseData":true
}
```

Please Note The content type that you pass in the header of your request should be **application/json**.
