

System Permissions

Version 75

Published 11/11/2009 07:36 AM by [Vivek Thakur](#) Last updated 5/11/2021 11:22 PM by [Grace Kamau](#)

CommuniFire uses a fine-grained, role-based permissions to manage access to different parts of the system. Permissions are given to [Roles](#) , and each user can have multiple roles.

System Permissions allow you to manage access to system administrative sections in the Control Panel.

Permission	Description
View Admin Section	Allow the user to view the Control Panel
Manage Settings	Allow the user to view and/or manage General Settings , Application Settings , System Properties , Profanity Filters , Robots.txt , Email Queue , Single Sign On , Log Archive Settings , CommuniFire Version
Manage Permissions	Allow the user to edit system permissions
Manage Email Templates	Allow the user to manage Email Templates
Manage URL Mapper	Allow the user to manage the URL Mapper
Manage CSS	Allow the user to manage CSS Overrides

Overrides	
Manage Store	Allow the user to manage the eCommerce store (deprecated for V3.0+)
Manage Licenses	Allow the user to manage licenses for your installation in the License Manager
Localized Content	Allow the user to manage Localized Content
Properties	Allow the user to manage Dynamic Properties
Recent Activities	Allow the user to manage User Activity
View Exception Log	Allow the user to view the Exception Log
Create Tag Groups	Allow the user to create Tag Groups
Apply Tag Group	Allow the user to use tag groups in their content
Search Tag Groups	Allow the user to search for content using tag groups

Top Level Permissions

Badge and Recognition Program Permissions

Set badge and recognition program permissions to control who can view and manage badges and recognition programs.

Top Level: Page Builder Permissions

Page Builder permissions give users access to create and edit Page Builder pages. Watch the video below to learn how to create a role just for Page Builder editors to give your designers access to just the Page Builder area of the Control Panel or Manage Space.

Space Permissions

Space permissions let you control access to administrative actions for spaces. Control who can create, update, and delete spaces in the Control Panel. Secure your groups and content with space permissions.

User Section Permissions

User section permissions control who can manage users and user-related features in the Control Panel.

Workflow Permissions

Workflow permissions control who can manage workflows in the Control Panel.

Content Permissions

Top level content permissions are the same as space level content permissions. Top level content permissions are updated in Control Panel > Content > select the content type > Permissions.
