

# Deactivate Content

Version 9

Published 12/7/2020 09:16 PM by [Grace Kamau](#) Last updated 3/7/2022 07:42 PM by [JD Flores](#)

Deactivate content if you no longer wish for that content to be enabled for a particular space or the top level community. Deactivating content will hide existing content of that type from public view. Supported content types: articles, blogs, CMS pages, ideas, videos, and wiki pages.

1. In the header, click **Spaces** and click a space.
2. Click **Manage Space**.
3. In the sidebar menu, click a content type.
4. Check content.
5. Click **Deactivate**.
6. Click **Yes**.

## Activate Content

Note: To allow activating content, the system property *CanResubmitAfterDecline* must be set to true in **Control Panel > System > System Properties**.

1. In the header, click **Spaces** and click a space.
2. Click **Manage Space**.
3. In the sidebar menu, click a content type.
4. For the content, click the options icon > **Edit**.
5. Click **Update**.

## Deactivate Top Level Content

You can deactivate top level content in **Control Panel > Content**.

### [Content Expiration](#)

Ensure that content in your intranet is always current and accurate by using content expiration. Select the date and time to expire content, and whether the content should be visible or hidden after expiration. You'll be notified when the content expires, and can then update or delete the content. Content expiration keeps the knowledge base in your intranet relevant and accurate.
