## Overview

CSS Overrides is your answer to customizing the look and feel of your intranet. Using CSS gives you much more flexibility than using a traditional web-based UI tool. CSS is a standard Internet technology used to style websites such as changing font styles, hiding elements, changing background colors, changing site width to full screen, and much more.

To access CSS Overrides, click the gear icon > **Control Panel** > **System** > **CSS Overrides**.

Add CSS code right in the editor. Remember to click **Save CSS overrides** after making changes!

Note: You can use CSS overrides to style and modify any front-end page - the homepage, space pages, user profiles, Page Builder pages, etc. Pages in the Control Panel and in Manage Space can't be styled with CSS overrides.

## Learn CSS

If you know absolutely nothing about CSS, we suggest reading the [W3Schools tutorial](#) first. The tutorial covers how to write CSS code, the different types of selectors that are used to modify a specific element or groups of elements, and various CSS properties such as background color, border, margin, and more.

## CSS Overrides Videos

Page Builder has built-in features that make it easy to target individual elements, groups of elements, and an entire page. Learn how to use CSS overrides to customize an entire page, a group of widgets, and one widget.
