

Translate User-Created Content

Version 5

Published 3/22/2021 07:00 PM by [Grace Kamau](#) Last updated 5/14/2021 09:57 PM by [Grace Kamau](#)

Note: To enable this feature, a site administrator must complete the [Google Cloud Translation Integration Administrator Setup](#).

CommuniFire provides integration with the Google Cloud Translation API to dynamically translate user-created content on the fly. Using fast and dynamic machine translation, you can quickly view content in your own language with just the click of a button. No need for content creators to manually create and maintain multiple versions of the same content.

To change user-created content to your own language, just click the language icon in the content header.

The screenshot shows the CommuniFire website interface. On the left is a navigation sidebar with categories like Artículos, Blogs, Calendario, Casos, etc. The main content area displays an article titled "Recognized as Best Place to Work in Region". The article header includes the author's name "Alexis Fox", publication date "3/18/2021", and engagement metrics (0 comments, 63 views, 0 votes). A red arrow points to a language icon (a small globe) in the header area, indicating the feature being demonstrated.

This screenshot shows the same article as above, but translated into Spanish. The title is "Reconocido como el mejor lugar para trabajar en la región". The author's name "Alexis Fox" and publication date "3/18/2021" remain the same. The engagement metrics are also the same (0 comments, 63 views, 0 votes). The language icon in the header is now active, indicating the translation feature is being used.

prosperen".

ACME Business Times compila su lista a partir de los resultados de la encuesta proporcionados voluntariamente por los empleados de la empresa. Los resultados
